

Fast – flexible – fashionable
Reduce lead time and inventory risk

The deep dyeable cotton yarn for maximum flexibility

Count range	Ne 16–100 (Nm 28–170)
Spinning system	combed, ring-, royal- or compact-spun solid or heather
Raw material	100% combed extra long staple cotton fiber length 34–38 mm
Origin	Switzerland

Rainbow-yarns made from other raw materials are also available.

Typical applications

- color wovens and knit fabrics, tone-on-tone or colored/white
- items offered in various color versions
- garment dyed items
- exhaustion dyeing
- replacement of conventional heather- and marled yarns

SwissCotton Rainbow® your advantages

- drastic reduction of lead-time
- reduced inventory levels
- reduced inventory risks
- no dyed-yarn inventories
- ideal for fashion colors and small lots

Quality certificates

- SwissCotton Premium®
- swiss+cotton®
- Supima®
- Cotton USA™
- Oeko-Tex Standard 100 plus

SwissCotton Rainbow® is a pretreated, high-grade cotton yarn, which dyes much deeper than regular, untreated cotton. Various levels of color depths can be achieved by using a combination of Rainbow yarns with different intensities of the Rainbow-treatment. Thanks to the different dyeing properties, patterns woven or knitted into the raw article can be made visible in the desired color after piece-dyeing. The dyeing process can be controlled in a way that a pattern appears "color on white" or "tone on tone" (different color depths).

Marled and heather-yarns are further applications very suitable for the Rainbow technology.

By dyeing an item in garment form, the lead-time for multi-color articles is reduced drastically. Since fast selling colors can be produced very quickly, inventory risks in the entire production chain are reduced substantially. Units in highly fashionable or seasonal colors can be manufactured in small lots without unreasonable efforts.
